4BUIS004C.3 Business Information Systems Concepts

Group Coursework Report
BIS – Group 2

Student Name	UOW ID	IIT ID
Theshara Ediriweera	W2151852	20241746
Sadeesa Wijethunge	W2151872	20232026
Vyishnavan Sathalogithasiva	W2001515	20221257
Adeesha Nimsara	W2151876	20241174
Chamathka Jayasingha	W2151858	20242077

Acknowledgment

We, as a team, would like to extend our sincere gratitude to Miss Suranji Cooray for her invaluable support and guidance throughout our BIS group coursework. Additionally, we wish to express our heartfelt appreciation to each other as friends and team members. Together, we exchanged ideas, overcame challenges, and provided unwavering support throughout the project. Thank you all for contributing to a successful and enjoyable experience.

Table of Contents

Executive Summary

This report examines Information Systems enabling modern businesses in four fields of organizational structures and systems, business functions and problems, electronic payments and transaction systems, and electronic marketing.

In Task 1, we explained how organizations work at the operational, managerial and strategic levels with the assistance of systems like TPS and MIS to achieve maximum efficiency and decision-making.

Task 2 highlighted issues with traditional enterprises and how new digital tools like ERP and CRM software supplement activities, customer engagement and security. Sequential implementation and employee training were also recommended for strategies.

Task 3 entailed the study of internet transaction types, the benefits and limitations of electronic payments and e-commerce, placing emphasis on secure systems as well as customer trust.

Task 4 examined Nike's online marketing revolution through social media, influencer and personal platforms. Initiatives like the Nike Training Club and members-only product drops have cemented its global brand and consumer loyalty.

All group members contributed with research, report preparation and role in meetings to give a holistic analysis.

Meeting Summaries

Meeting	Date	Name of Chair	Name of Secretary	Action Plan
Initial Planning	2025/06/11	Adeesha	Sadeesa	Review the distribution of responsibilities and set up a meeting timetable
Interim Progress 1	2025/06/18	Vyishnavan	Chamathka	Discuss progress on task 1 and find the solutions for the issues
Interim Progress 2	2025/06/20	Sadeesa	Vyishnavan	Review progress on task 2 and discussed the issues.
Interim Progress 3	2025/06/24	Chamathka	Adeesha	Evaluated how Task 3 is progressing and discussed any difficulties
Interim Progress 4	2025/06/27	Theshara	Sadeesa	Checked the progress of task 4 and discuss the issues
Final Sign Off	2025/07/06	Sadeesa	Theshara	Finalised the Report

Task 01: Information Systems at Different Organizational Levels

1)Discussion of Information Systems at different organizational levels

Organizational Levels

Organizational structure dictates how a company coordinates activities to achieve its goals, encompassing task allocation, decision-making, workflows, and communication. Effective structuring is crucial for operational efficiency and goal attainment. Organizations typically comprise three distinct levels: Operational, Managerial, and Strategic, each with unique information requirements. Structures can be categorized by their chain of command (tall vs. flat) and decision-making concentration (centralized vs. decentralized). The importance of organizational structure lies in clarifying task allocation, establishing decision-making hierarchies, and optimizing workflows and communication channels.

Operational Level

The Operational Level is responsible for day-to-day operations and is characterized by highly structured decision-making based on defined rules. Users at this level include front-line staff such as cashiers, bank tellers, and customer service representatives.

Focus of Computer-Based Systems at the Operational Level

Computer-based systems at this level primarily focus on executing and recording routine business transactions with speed, accuracy, and consistency. These systems generate the raw data essential for higher-level decision-making.

Information System Used: Transaction Processing System (TPS)

The Transaction Processing System (TPS) is the foundational information system at the operational level. It captures, classifies, stores, maintains, updates, and retrieves transaction data. TPS improves routine business activities like order placement, billing, and inventory management, providing speed and accuracy through systematic processes.

- **Key Features:** Real-time or batch processing, structured decision-making, high reliability and consistency, used by frontline staff.
- **Benefits:** Efficiency, accuracy, real-time updates, enhanced customer satisfaction, data availability, cost savings.
- **Real-World Example:** A Point of Sale (POS) system in a retail chain (e.g., Keels supermarket) scans items, calculates totals, updates inventory instantly, and records payment details, ensuring smooth operations and accurate stock tracking.

Managerial Level

The Managerial Level comprises middle-level managers, department heads, and supervisors who oversee operational activities. Decision-making at this level is semi-structured, combining established guidelines with judgmental calls.

Focus of Computer-Based Systems at the Managerial Level

Computer-based systems, primarily Management Information Systems (MIS), support tactical decision-making and monitor organizational performance. They translate operational data into actionable insights for middle managers.

Information System Used: Management Information System (MIS)

MIS provides management with essential, relevant, timely, accurate, complete, and concise information for policy-making, planning, and control. It leverages processed data from TPS to facilitate reporting and analysis.

- **Key Features:** Generates routine reports, supports budgeting and forecasting, monitors departmental performance, aids resource allocation and problem identification.
- **Benefits:** Informed decision-making, performance monitoring, resource optimization, problem identification, improved planning, consistency, better communication.
- **Real-World Example:** A regional manager at a retail chain might use MIS to compare weekly sales across branches, identify products needing promotion, or adjust staffing based on foot traffic trends. MIS bridges operational data with strategic insights.

Strategic Level

The Strategic Level is the highest level of an organization, consisting of senior executives responsible for long-term planning and unstructured decision-making. They utilize both internal and external data.

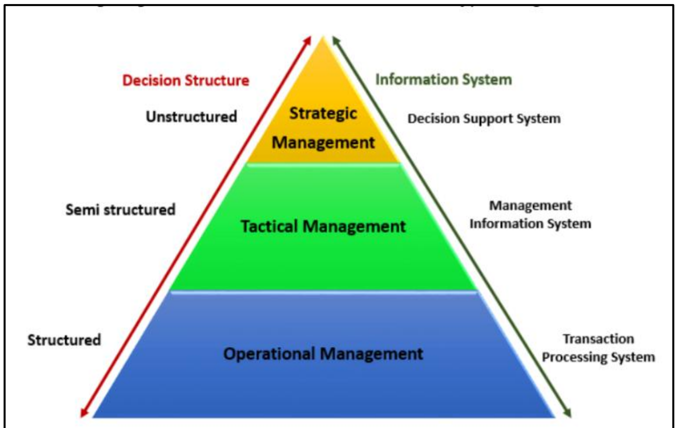
Focus of Computer-Based Systems at the Strategic Level

Computer-based systems at this level support long-term planning, competitive positioning, and high-level decision-making. They help anticipate trends, evaluate risks, and align technology with business goals.

Information Systems Used: Executive Support Systems (ESS) and Strategic Information Systems (SIS)

- **Executive Support System (ESS):** Designed for high-level executives, ESS provides access to key data, critical analyses, and strategic information through user-friendly interfaces and visualization tools. It aggregates data from multiple sources to aid trend identification, performance monitoring, and strategic planning.

- **Benefits:** Enhances strategic insight and long-term planning, improves competitive positioning, facilitates data-driven innovation, saves executive time.
- **Strategic Information System (SIS):** An SIS is any system that provides an organization with a competitive advantage. It impacts operations, goals, services, products, or environmental relationships to achieve competitive superiority. SIS plays a vital role in helping organizations achieve their objectives.
- **Benefits:** Competitive advantage, strategic alignment, market responsiveness, innovation enablement, data-driven strategy.
- **Overall Benefits of the Strategic Level Systems:** Long-term vision support, competitive advantage, data-driven strategy, risk management, resource alignment, market responsiveness, innovation enablement.
- **Real-World Example:** Amazon executives use ESS to analyze global buying behavior, forecast demand, and make strategic investment decisions (e.g., in drone delivery or AI-powered logistics).



Pyramid Diagram

Task 02 : Information Systems and Business Functions

1)Identify the main challenges the manufacturer faces in each area.

Introduction

In emerging markets, the digitalization of business is no longer an option but rather a demand of traditional businesses meant to sustain a competitive edge in the market. A manufacturer of electronics products that has outdated systems is experiencing a heat wave with the entry of digital-firsts.

The chapter examines the question of what challenges the company encounters, how the performance of the company can be upgraded with the help of digital technologies, the strategy of technology adoption should be, and how and why transformation can serve as the guarantee that the competitiveness is secured.

Areas of Operation Problems

Such difficulties of a manufacturer normally begin with poor operating efficiency due to too much equipment downtime and out-dated machinery as well as the slowness of production and increasing costs because of manual methods. The poor customer engagement is the fact that there was no personalized data-driven communication where the customers could be reached, as well as a lack of digital connections with them.

As per real-time data, decision-making abilities are impaired significantly because of the absence of data. Weaknesses of decentralized supply chains include lack of coordination and delays in the supply chains caused by a lapse in the presence of digital tracking systems. Improper protection of business on digital evolution can also be a result of introducing new digital tools without sufficient protective mechanisms, forcing the business into the field of cyber defense.

2)Explain how digital technologies can enhance efficiency and competitiveness

Increasing Competencies and Competitiveness by Means of Digital Technology

Digital technologies may change the manner in which companies perform their operations. To give an example, internet of things (IoT) and automation technologies are able to reduce the amount of manual labor and speed up the production process. AI and CRM technology can increase customer satisfaction because such technology allows faster and more versatile service. Managers are assisted in making fast and smart decisions based on data analytics with real time data available to them.

Technology is seeing supply chains grow leaner and smoother as data become more visible between the cloud systems. The company security is guaranteed by firewalls and data encryption that ensure better cyber security to protect the operating processes during the digital transition.

Technologies Improving Performance

- IoT and automation – streamline production
- AI and CRM – enhance customer experience
- Data analytics – support smarter decision-making
- Cloud systems – improve supply chain visibility
- Firewalls and encryption – ensure cyber security
-

3)Suggest key strategies for implementing digital transformation while managing risks. (5 marks)

Digital Transformation and Risk Management Strategies

The use of new digital tools will require appropriate instruction and training of the employees to be confident in their use. It is necessary that the company utilizes a progressive approach. When the professionals working in the field of IT will be used, the process of setting up will become more streamlined and there will be fewer operational errors. Systematic risk is minimized through appropriate prevention of risk policies that specifies strict utilization of cyber security and surveillance of software. Good executives with strong goals and backed by a solid digital roadmap helps ease adoption procedures and improve effectiveness.

Key strategies for transformation

- Train employees to confidently use digital tools
- Start with a phased or pilot-based rollout
- Involve IT professionals for setup and integration
- Apply strong cyber security policies and software monitoring

- Use clear digital goals and leadership support

4)How can digital transformation help the company stay competitive in the market?

Keeping Up to Date Competitively using Digital Transformation

With a digital transformation, the organization will be able to enhance its agility, efficiency of operations and customer service. The agility of operation reduces expenditures and errors, and the digital involvement promotes loyalty and winning of new customers. Better data access increases the ease of innovation and dynamic decision making. E-commerce and online adverts promote new markets. The opportunity to meet the demands of the modern ubiquitous customers and the ability to keep up with the rivals in the industry can be achieved through appropriate digital investments.

Digital transformation helps the company stay competitive by

- Reducing costs and improving process speed
- Strengthening customer loyalty through digital engagement
- Enabling faster and smarter innovation
- Expanding into new markets via e-commerce
- Matching or outperforming digital-first competitors

Task 03: Eco Growth Online Business Models

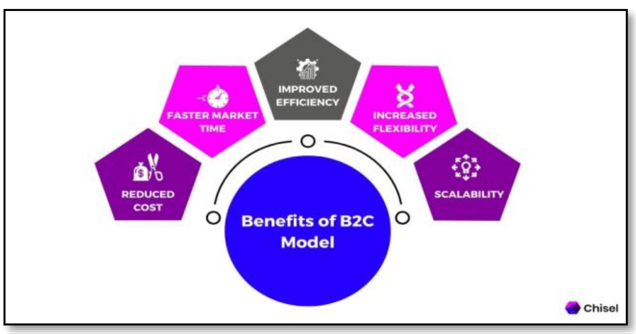
To enable global development and optimize client service, an eco-growth consumer products company needs to employ various online trading models.

Business to Consumer (B2C)

The eco-friendly company should focus on **Business-to-Consumer (B2C)** transactions as the main way to sell products directly through its online store. The B2C(Business-to-consumer)model directly impacts the environment positively as it allows eco businesses to reach out consumers that genuinely care about the planet. These firms now have the opportunity to do business directly , avoiding the expenses of incendiaries such as wholesalers and retail chains . this also contributes to improving control over customer experience, choice and packaging,delivery channels, marketing in relation to social responsibility, and other factors

Moreover, enterprises have an opportunity of cultivating a distinctive market orientation based on environmental issues such as no plastic packagings, environmentally friendly trade operations, and local manufactures. Furthermore, B2C models offer even utility access to customer information that is crucial in terms of personalization of shopping and building long-term loyalty toward the selected brand.

Lush Cosmetics is an excellent illustration of a B2C green business model, selling directly to customers online through its website and mobile app (Lush, 2023).



Business to Business (B2B)

The eco-friendly company can also use the B2B(Business-to-Business) model to sell products in bulk to other business-like hotels, supermarkets, or stores that have an interest in sustainability. This helps the company to achieve steady revenue and uphold smooth productions.

B2B sales introduce long-term partnerships and allow the company to grow without paying a lot for advertising. The company can reach more people and extend its coverage through agreements with other environmentally friendly companies.

This model also allows for cooperative efforts in environmental conservation. It creates strong business ties and encourages fresh concepts for eco-friendly goods and customer packages.

.

Mobile Commerce (m-commerce)

M-commerce, or mobile commerce is buying and selling products through mobile phones such and smart phones. To green companies, this is especially valuable because it allows them to target customers conveniently and easily through mobile sites or mobile application. With ongoing growth in mobile usage across the globe, green consumers increasingly like to browse, shop and buy directly from their phones.

M-commerce enables transactions to be made quickly, peerlessly and results in e-receipts which suits the sustainability goals of environmentally friendly firms. It is easy to reach the green customer through location-based offers, green products alason, and making their subscriptions on refills.

With mobile payment methods like Apple Pay, FriMi, or eZ Cash, the checkout process is quicker and safer too. This is especially beneficial in countries like Sri Lanka where mobile wallets are commonly accepted. With m-commerce, the business is able to deliver superior, more environmentally friendly buying

.

Subscription Models

A subscription plan enables consumers to pay regularly (e.g., monthly) to receive products automatically. This can be useful for ecologically friendly businesses selling reusable goods, natural cosmetics, or organic food subscription boxes. It simplifies shopping for the consumer and generates consistent sales.

This model also encourages sustainability. Businesses can reduce packaging and package deliveries in bulk to save fuel. Customers are more likely to develop green habits if they get things like plastic-free soaps or bamboo toothbrushes every month without needing to reorder.

Subscriptions provide the company with a consistent flow of revenue and ease stock planning. It reduces waste and enables them to offer more personalized choices or better promotions. It also brings them closer to customers in a way by providing a constant, sustainable service.

E-Commerce Integration: Benefits and Risks

Economic growth, development, and prosperity of an eco-friendly consumer goods business are greatly eased through the use of digital payments and e-commerce platforms. Although there are many operational, strategic, and customer benefits, it is accompanied by large-scale risks that need to be envisaged and managed accordingly.

Potential Benefits

Global Market Reach

Global market coverage is the ability of the green business to extend its reach beyond regional borders and sell internationally through electronic commerce and digital payment systems. E-commerce and digital payment services provide access to a global market, and the brand can:

- Sell to international consumers without stores in every country.
- Sell products in numerous languages and currencies.
- Use global shipping and virtual stores (such as Shopify, Etsy, and Amazon) to mail orders.
- Sell in overseas marketplaces where consumers are becoming more and more demanding for sustainable products.

Operational Efficiency

Operational efficiency is how an organization uses its resources in making products in a timely, accurate, and less wasteful manner. An eco-friendly firm's efficiency improvement is not only for reducing costs but also for supporting sustainability initiatives.

Computer systems like e-commerce websites and automatic payment systems help to streamline everyday operations. Inventory management in real time eliminates the risks of overstocking and reduce wastage, while online ordering platforms reduce paperwork needs and the risks of mistakes. Computerized payments speed up transactions and reduce paper usage. Using fewer resources—like power, packaging, and materials—these systems lower the company's operating costs and make its transition to eco-friendly operations more feasible.

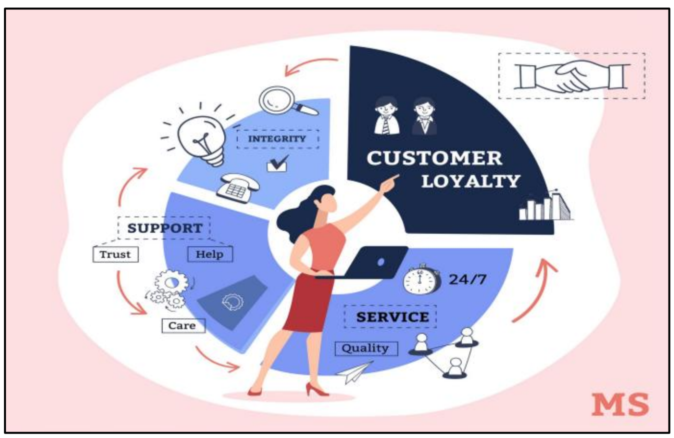
Enhanced Customer Convenience and Trust

Convenience and trust of the customer are essential for global

e-commerce success. With a variety of secure payment methods like Paypal , credit cards and mobile wallets the company allows, the company allows customers from different countries to checkout conveniently. Mobile –friendly checkout, local currency display , and multilingual checkout are other aspects that give a nice user experience

Fast order confirmations, real-time tracking, and clear return policies make the buying process smoother and more reliable. These features reduce confusion and build confidence, helping the company meet global customer expectations.

Trust is strengthened through strong security and transparency. Using trusted payment gateways and following data protection laws like GDPR ensures customer information is safe. Sharing eco-certifications, ethical sourcing details, and positive reviews boosts the brand's credibility and encourages repeat purchases



Data-Driven Decision Making

Data-driven decision making refers to analyzing customer data to make business decisions more informed. For instance, the company can track what products customers view, purchase, or leave in their shopping carts. This helps companies know customer habits and what they like.

By analyzing this information, the business can plan promotions better, manage stock levels, and improve the site or the checkout process. It helps personalize offers to the individual customer for increased likelihood of repeat sales. By using the information in this manner, the business helps make smarter decisions, improves efficiency, and compete effectively in the marketplace.

Possible Dangers

Cyber Security Threats

Cyber security means protecting a business's website, payment systems, and customer data from Internet-based threats like hackers, spam, or data loss. If not protected, customer data, such as credit card numbers or personal information, may be compromised. This can hurt the company's reputation and deter people from shopping online. Secure payment processing, secure web sites, and strong passwords minimize these risks.

Legal and Regulatory Compliance

Legislation and regulatory compliance need the firm to conform to the legislation and regulation of all countries where it is conducting business. When carrying out online business in the global marketplace, the company must protect customers' data, be privacy law compliant like the GDPR in the European Union, and have secure payment facilities.

Non-compliance with them may lead to penalties or loss of customer trust. Following these regulations is necessary to operate the business in a safe and unbiased manner in other nations as well.

Cultural and Language Barriers

There are cultural and linguistic differences that arise when a company goes international into new countries whose citizens speak different languages or have different modes of functioning, buying behavior, and traditions. That behavior can include colors, language, or advertising that can work in one country but be confusing or even insulting to another.

If the website is in a foreign language or local payment systems are not accessible, the customers will be uncomfortable or refuse to order. To survive globally, the company needs to translate its website, provide accessibility to local payment systems, and understand every nation's culture so that customers can feel comfortable and valued.

Supply Chain Disruptions

Supply chain disruptions occur when there is either a delay or problem in receiving raw materials, packaging, or transporting the product to consumers—especially globally. They may be caused by shipping delays, customs regulations, labor disputes, or even acts of

God. For a green company, they can mean delayed shipments, additional costs, and unhappy customers. To help reduce such risks, the company needs to negotiate with reliable suppliers, use local resources when they are available, and have alternatives in place in the event of unexpected delays.

Task 04: Evolution and Implications of Digital Marketing

1)Analyze how Nike's digital transformation has influenced its global brand presence, customer loyalty, and direct-to-consumer strategy

What is Digital Transformation?

Digital transformation is the integration of digital technologies into all areas of business, radically changing how a business operates, interacts with customers, and delivers value. This involves the adaptation of tools like AI, Cloud computing, and Data analytics.

Introduction

Nike has experienced an extensive digital transformation, evolving from conventional marketing to a digitally driven one. This report examines the impact of Nike's digital transformation on its global brand presence, customer loyalty, and Direct-to-Consumer (DTC) strategy. It also assesses the success of Nike's digital marketing efforts in maintaining its industry leadership, backed by concrete examples and secondary research.

Global Brand Presence

Nike's shift to online platforms has drastically increased its audience worldwide. Nike engages with various audiences through social media platforms like Instagram, Twitter, Facebook, and TikTok. Nike's Instagram and Twitter accounts are now reservoirs of inspirational posts, user-generated fitness challenges, and audience engagement.

Its '#JustDoIt' campaign, launched on social media, is a cultural symbol of empowerment. Nike's localized marketing strategies in various markets, such as tailored product offerings in respective markets (e.g., light-weighted apparel for hot and humid climates), have cemented its position in markets such as North America, China, and Western Europe, with North America contributing over 44% of its revenue.

Customer Loyalty

Nike's digitalization has enabled greater customer loyalty thanks to personalization and community creation. The Nike Plus membership program, accessible via the Nike App, offers exclusive product access, one-to-one recommendations, and tailored content, addressing over 150 million members as of 2023.

The Nike Training Club (NTC) and Nike Run Club (NRC) apps provide personalized workout plans, free fitness content, progress tracking, and exclusive access to limited-edition products, forming emotional connections with users and building trust and loyalty for the brand.

With the invitation of personal content through hashtags like NikePlus, Nike converts customers into brand ambassadors, further deepening loyalty.The Nike App also offers a feeling of belongingness by adding community-driven features such as member events, workout milestones, and localized experiences, reinforcing customer attachment to the brand.

These personalized and value-added experiences build emotional loyalty, with customers more inclined to return and engage with the brand.

Direct-to-Consumer Strategy (DTC)

The DTC strategy is a company strategy where the business sells its products directly to consumers through its own channels, including its websites, apps, and retail stores, rather than through traditional wholesale partners.

By reducing its reliance on third-party retailers and focusing on its own digital assets, Nike achieves higher profit margins and gains more granular consumer data. In FY2023, online sales accounted for over 26% of Nike's total revenue, reflecting the success of this strategy.

Direct selling through its own channels gives Nike rich, first-party data, allowing more targeted marketing, faster feedback loops, and greater customer insight. The strategy increases brand control, creates new revenue streams, and builds more sustainable long-term customer relationships.

2)Using specific examples, evaluate the effectiveness of Nike's digital marketing initiatives and their role in sustaining Nike's industry dominance

The Impact of Digital Marketing on Nike's Market Leadership

Nike has heavily embraced digital marketing in support of its leadership in the global sportswear industry.

Personalization and Customer Engagement

Nike utilizes AI and data analytics in delivering personalized digital experiences to customers.

The Nike App offers users personalized product suggestions based on their interests, behavior, and past purchases. This focus on personalization is crucial at a moment when consumers are used to getting personalized shopping experiences. Nike also uses features like "sneaker drops" and exclusive member-only access to limited-edition gear, which create exclusivity and anticipation. Exclusive promotions and personalized training content are also offered to members.

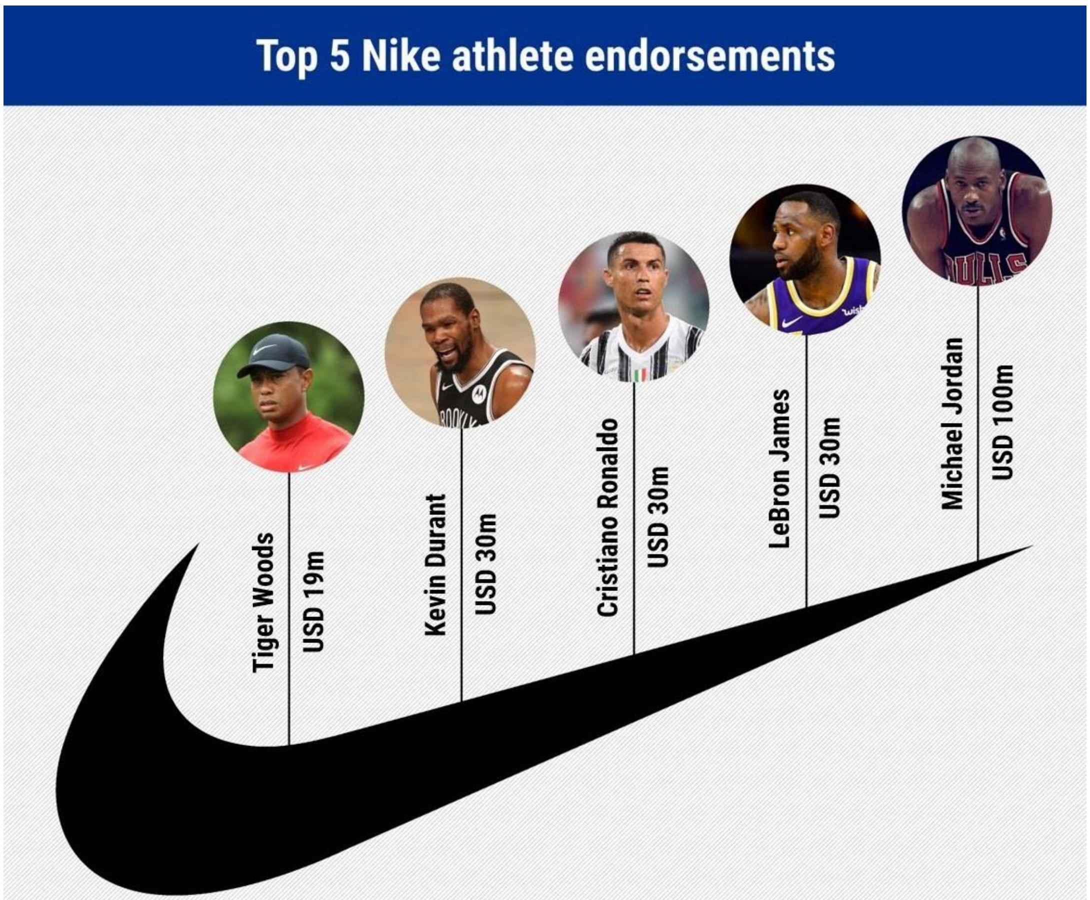
Effectiveness: This tactic improves customer satisfaction, loyalty, and purchase frequency. Personalization can increase revenue by 10–30%, says McKinsey (2022).

Storytelling through Social Media Campaigns

Nike is famous for emotionally engaging campaigns that go viral on digital media channels.

This "You Can't Stop Us" video, premiered during the COVID-19 pandemic, combined athletic excellence with messages of resilience and togetherness. It received over 50 million YouTube views and was praised for its editing and emotional appeal. Nike effortlessly builds the right emotions with edited content, rarely presenting briefings on its products and services. Some of the famous Nike quotes include:

- "We gave up giving up."
- "All you have to do is pick up your feet."
- "My better is better than your better."
- "Don't believe you have to be like anybody to be somebody."



Nike's emotional branding has been a successful strategy, bringing about the emotions of success, morale, victory, and self-improvement, which has made it such a powerful product. Effectiveness: These campaigns enhance brand reputation, foster emotional engagement, and position Nike as a socially responsible brand, which is key to remaining relevant with younger, values-driven consumers.

Athlete and Influencer-Led Content

Nike leverages high-profile athletes and influencers to optimize its digital footprint.

Campaigns led by Cristiano Ronaldo, Naomi Osaka, and Serena Williams reach millions on social media with messages of performance, empowerment, and inclusion.

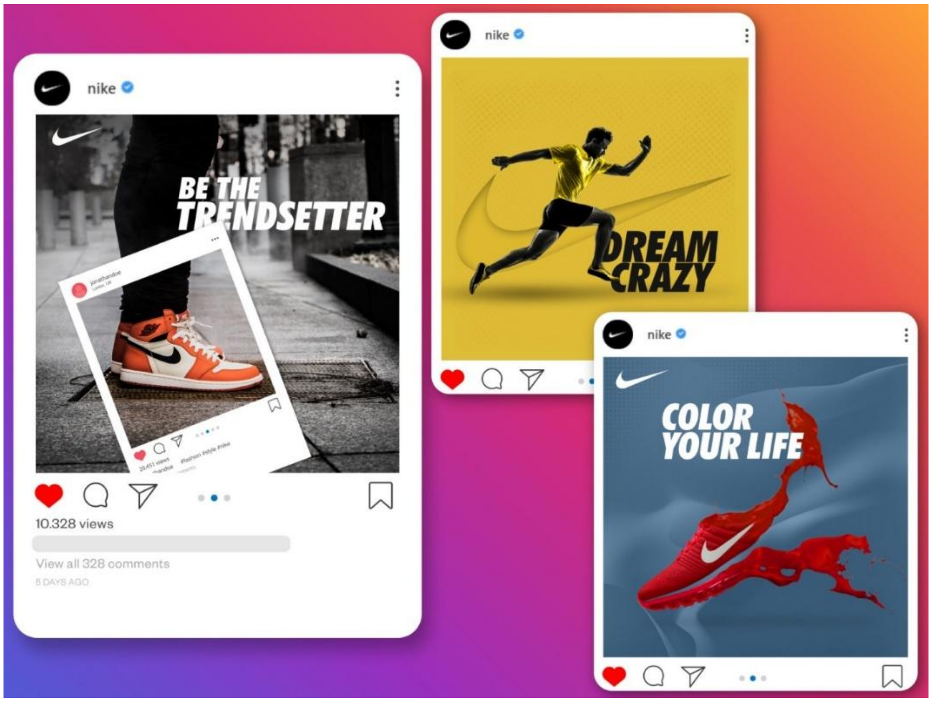
Nike has a long tradition of associating with elite athletes, celebrities, and sports teams that form the foundation of its marketing. These associations enhance Nike's credibility and authenticity and expand its reach.

Cristiano Ronaldo – Instagram Influence and Nike Lifetime Deal: Ronaldo, the most followed individual on Instagram (with more than 630 million followers in 2025), is a long-time Nike athlete. He regularly appears in Nike ads, stories, and sponsored posts.

- Effectiveness: A single Ronaldo post in Nike gear can garner millions of likes and deliver a return on investment for Nike far greater than traditional media advertising means. Ronaldo helps Nike dominateJUS the global football market.

Serena Williams – "You're Watching Serena, So Are Your Daughters" Campaign: In 2022, Nike released a digital campaign featuring Serena Williams called "By Changing Nothing, She Changed Everything," celebrating her legacy as a barrier-breaking athlete and role model.

- Effectiveness: The campaign went viral on Instagram, Twitter, and YouTube, reaching millions of individuals within a matter of days and fueling global media discussion. It particularly resonated with young athletes and female consumers, reaffirming Nike's position as a brand that champions equality and empowerment.



Building Communities Using Apps

Nike doesn't just sell sneakers—it builds digital communities.

Nike Run Club and Nike Training Club apps offer free workouts, tracking, and coaching.

The Nike Run Club app, a free social fitness application for runners, offers:

- Guided runs with audio coaching from Nike-sponsored athletes (e.g., Eliud Kipchoge).
- Personalized training plans for different levels.
- Social features like challenges, badges, and leaderboard rankings.

Social sharing of runs and achievements through social media integration.

Nike encouraged home or outdoor activity during the COVID-19 pandemic with NRC and made all premium content free on both NRC and Nike Training Club.

Effectiveness: It resulted in 100%+ increase in app downloads during the first few months of the pandemic, brand engagement through virtual challenges like "YouCantStopUs" and "5K May" and user-generated content in support of the app. Millions of runners from around the world took part in Nike's virtual global challenges, which provided them with a feeling of togetherness. By providing value to customers' everyday lives, Nike increases brand loyalty and everyday usage, having long-term customer relationships with users.

Digital-First Product Launches

Nike uses exclusive channels like the SNKRS app to launch limited-edition shoes and create hype.

SNKRS drops consistently sell out within minutes, with gamified features like drawings, AR previews, and insider access. Effectiveness: This strategy drives demand, exclusivity, and app utilization. It also supports Nike's direct-to-consumer business model, reducing dependence on retailers, and creates a sense of urgency and exclusivity, driving massive engagement, especially among sneaker collectors and Gen Z.

Conclusion

Organizations rely on information systems, which play a basic role in the operation, management, and planning of any organization. Digital transformation ceases to be a choice that companies can make but rather a necessity to increase efficiency, customer interaction, and supply chain management, as well as face cyber security challenges. Utilizing advanced technologies, such as IoT, AI, and cloud computing, businesses will be able to lower expenses, develop innovative practices, and introduce to the market to get a competitive advantage.

Even the eco-friendly companies are finding online business models such as B2C, B2B, and m-commerce to be very important in terms of expansion and establishment of a strong customer base. These provide scale and efficiency all over the world, but it is pivotal to navigate issues such as security and compliance. The success story of Nike provides weight to the influences of customized online advertising, compelling narration, and networks. In short, strong information platforms and agile digital channels will be imperative components of any organization that desires to achieve continuous success in the current digital environment.

Appendices

Meeting Agendas and Meeting Minutes

First Meeting Agenda

Chair: Adeesha

Title: Initial discussion on the BIS Coursework Overview

Topics for Discussion:

- Coursework overview, requirements, and deadline
- Clarification of questions related to the coursework
- Division of tasks among group members
- Issues related to assigned tasks

Minutes of the First Meeting

Secretary: Sadeesa

Date: 2025/06/11

Time: 1.00 pm- 2.00 pm

Location: IIT Dialog Building Study Area

Meeting Attendees: Theshara, Chamathka, Sadeesa, Vyishnavan, Adeesha

Meeting Summary

- The group discussed the coursework overview, requirements, and deadline. (1.00 -1.15)
- Questions related to the coursework were resolved. (1.15 -1.30)
- Tasks were divided among group members. (1.30 -1.40)
- Members were asked if they had any issues with their assigned tasks.(1.40 - 1.45)
- The meeting ended with a discussion about tasks to be completed before the next meeting. (1.45 -2.00)

Second Meeting Agenda

Chair: Vyishnavan

Title: Review of progress and discussion of Task 1

Topics for Discussion:

- Review of previous meeting
- Members share their research findings on Task 1
- Group provides feedback on each other's research
- Discussion of assigned questions and tasks

Minutes of the Second Meeting

Secretary: Chamathka

Date: 2025/06/17

Time: 2.30 pm- 3.30 pm

Location: IIT Dialog Building Study Area

Meeting Attendees: Theshara, Chamathka, Sadeesa, Vyishnavan, Adeesha

Meeting Summary

- The group reviewed key points from the previous meeting. (2.30-2.45)
- Each member presented their findings for the task 1. (2.45-3.00)
- Members gave feedback on each other's research. (3.00-3.15)
- The group discussed the questions and tasks allocated. (3.15-3.30)

Third Meeting Agenda

Chair: Sadeesa

Title: Review of progress and discussion of Task 2

Topics for Discussion:

• Review of previous meeting

• Members share their research findings on Task 2

• Group provides feedback on each other's research

• Discussion of assigned questions and tasks

Minutes of the Third Meeting

Secretary: Vyishnavan

Date: 2025/06/21

Time: 2.30 pm – 3.30 pm

Location: IIT Dialog Building Study Area

Meeting Attendees: Theshara, Chamathka, Sadeesa, Vyishnavan, Adeesha

Meeting Summary

- The group reviewed key points from the previous meeting. (2.30-2.45)
- Each member presented their findings for the task 2. (2.45-3.00)
- Members gave feedback on each other's research. (3.00-3.15)
- The group discussed the questions and tasks allocated. (3.15-3.30)

Fourth Meeting Agenda

Chair: Chamathka

Title: Review of progress and discussion of Task 3

Topics for Discussion:

• Review of previous meeting

• Members share their research findings on Task 3

• Group provides feedback on each other's research

• Discussion of assigned questions and tasks

Minutes of the Fourth Meeting

Secretary: Adeesha

Date: 2025/06/30

Time: 2.30 pm – 3.30 pm

Location: IIT Dialog Building Study Area

Meeting Attendees: Theshara, Chamathka, Sadeesa, Vyishnavan, Adeesha

Meeting Summary

- The group reviewed key points from the previous meeting. (2.30-2.45)
- Each member presented their findings for the task 2. (2.45-3.00)
- Members gave feedback on each other's research. (3.00-3.15)
- The group discussed the questions and tasks allocated. (3.15-3.30)

Fifth Meeting Agenda

Chair: Theshara

Title: Review of progress and discussion of Task 4

Topics for Discussion:

• Review of previous meeting

• Members share their research findings on Task 4

• Group provides feedback on each other's research

• Discussion of assigned questions and tasks

Minutes of the Fifth Meeting

Secretary: Sadeesa

Date: 2025/07/02

Time: 2.30 pm – 3.30 pm

Location: IIT Dialog Building Study Area

Meeting Attendees: Theshara, Chamathka, Sadeesa, Vyishnavan, Adeesha

Meeting Summary

- The group reviewed key points from the previous meeting. (2.30-2.45)
- Each member presented their findings for the task 4. (2.45-3.00)
- Members gave feedback on each other's research. (3.00-3.15)
- The group discussed the questions and tasks allocated. (3.15-3.30)

Final Meeting Agenda

Chair: Sadeesa

Title: Preparing proofreading and report submission planning

Topics for Discussion:

- Preparing and proofreading the final report
- Ensuring citation and formatting standards
- Confirming submission details
- Reflecting on group contributions

Minutes of the Fifth Meeting

Secretary: Theshara

Date: 2025/07/02

Time: 3.00 pm – 4.00 pm

Location: Online via Google Meet

Meeting Attendees: Theshara, Chamathka, Sadeesa, Vyishnavan, Adeesha

Meeting Summary

- The group proofread the final report for grammar, structure, and citation accuracy. (3.00-3.15)
- Final formatting was confirmed in line with academic standards. (3.15-3.45)
- Submission logistics were finalized. (3.45-3.50)
- The group reflected on individual roles and overall collaboration throughout the project. (3.50-4.00)
