4BUIS004C.3 Business Information Systems Concepts

Individual Report

Lecturer Name: Ms. Suranji Cooray

Name - Sathalogithasiva Vyishnavan

IIT NO – 20221257

UOW No: W2001515

Personal Contributions

My main responsibility in our group coursework is Task 1: Discussion of Information Systems at Different Organizational levels. This task required me to explore and analyse how computer-based systems support decision-making at various levels of an organization (Operation, Managerial, and Strategic).

I have also researched information about the structures of organizations and the way systems such as Transaction Processing System (TPS), Management Information Systems (MIS) and Executive Support Systems (ESS) function. I further explain Strategic Information Systems (SIS) and how they provide competitive advantage. I also provides practical knowledge by talking about Point-of-Sale systems within a supermarket chain (Keells) and Amazon engaging ESS to ground the topic whilst making it concrete and tangible.

This work developed the initial sense of current and future use of information system in structured, semi-structured and unstructured decision-making by businesses in various hierarchies. This not only made our project consistent with its goals, which is to conduct research on relevance of information systems in business but also established an authentication of academic image to the rest of the report.

Collaboration and Teamwork

We were able to share the work among team members according to their strengths. I undertook Task 1 which involved research and technical writing and communicated frequently with the team so that my section blended in with the overall tone and structure of the report. To collaborate and keep track of progress, we employed the use of Google Docs and WhatsApp to view and comment on each other work.

In addition to my responsibilities, I helped review and edit the other sections. I also assisted in establishing overlaps and uniformity of language and contributed to clarity throughout the report. When a team member encountered difficulties with non-abstractive instances, I offered helpful references and enhanced his/her content.

We also experienced format and style problems in writing close to the deadline. To overcome this, we assigned roles of editing and proofreading. I assisted the process through reading the entire report to make it consistent and logical in flow.

All in all, I gave to the part and part of the package to produce a high-quality and well-integrated final report.

Strengths and areas for development

I showed good analytical and writing skills here. I managed to summarize the technical material into clearly marked areas, ensuring that the main systems (TPS, MIS, ESS, SIS) were explained thoroughly, with real life examples given. I was able to conduct independent research and deliver results on time, which was effective in keeping the team on track.

Nevertheless, I discovered that I could facilitate better about teamwork at the initial level. My initial issue is that I was too concentrated on my own part and I was not too much involved with cross reviewing the work of others. During the next group task, I will be more engaged in providing feedback to team members at an earlier stage of work.

Secondly, I feel I need to improve on my visual communication and formatting skills so that I can help the team with the final editing and formatting processes

Reflection and Group Experience

It was quite a gratifying experience to work in this group. Brainstorming, frequent meetings and feedback allowed us to support one another. I liked it especially that each member owned up his/her tasks and contributed insights distinctly. This contributed to the efficiency of our cooperation making it enjoyable.

Some of the problems were small overlapping data and last-minute proofreading. Our solution was to read through each part as a group and come up with minor changes corporately. In my opinion, we adhered to the rules of respectful and concentrated teamwork that helped us ensure the harmony of the group and the congruent report.

This team worked intensively to broaden my perspectives on the application of theoretical concepts in information systems in business practice. It also emphasized the significance of organization, clarity, and incorporation in working together on either academic or professional documents.

Key Takeaway and Future Application

This experience made me realize that group coursework needs to have solid roles and effective communication. I also understand that my strong suits are in analytical writing and system analysis, which I expect to develop during future coursework and career as business analysis or IT consulting.

Next time I work in a group, I will ensure to provide a healthy mix of solo task completion and close teamwork and critique. On the professional level, the experience taught me that the coordination of individual endeavours and team efforts is vital and that information systems, the structure of which is well-designed, are highly valued in terms of supporting decisions on all level of an organisation.
